# POWERING Business. EMPOWERING You.

Find out how our technology can protect your business at:

**VerifiedNet.com**

## SECURITY & ENCRYPTION

Reduce your liability and protect your data from malicious or inadvertent loss through industry-leading security and encryption methods. Data is encrypted at point-of-capture and transported using TLS/SSL technology to ensure it remains protected. Security you can rely on at capture, transport and rest.

## COLLABORATE & SHARE

Dynamic, permission-based collaboration between connections in your own private network. Discuss images, documents and files in real-time. Privately share and discuss ideas with co-workers and external contacts in a fully-encrypted, secure workspace. Protecting you, your data and your customer.

## PRIVATE STORAGE

Imagine if you can store your data files in a secure, encrypted environment, accessible from any Internet connected device with the right authentication. Now you can! Verified has private servers that store data files and associated metadata in a secure data centre located outside earthquake zones in North America. 24/7/365 access to your data.
