

VERIFIED

SECURE VISUAL DOCUMENTATION. SIMPLIFIED.

You build homes... We build business!

Verified is an ideal tool for use in and around the construction site. Engage Project Managers and on-site trades, capture your build progress, share photos and notes with your team and collaborate with stakeholders to become more efficient, save time and provide a full visual history of each and every project.

Project Management

Project Managers use Verified to maintain a visual log of progress on site. During routine inspections and walkthroughs, the Project Manager can easily document progress on site to generate eye-catching visual reports on return to the office.

Issues can be dealt with in real-time, liaising with trades and site personnel to ensure projects keep moving. Communicate securely with your client and external professionals using in-app messaging and photo annotations. Maintain an audit of work completed and store on file for maintenance.

The Verified App provides Project Managers, Site Supers and the Client with immediate photos and data to make informed decisions and to maintain a progress log.

Verified business benefits:

- On-site Photo and Data Collection
- Realtime Collaboration
- Maintain a full project history
- Quickly create visual reports
- Integrates into GIS/PM software
- Secure Communications
- Team management interface
- Easily archive photos and data for years

Simple Reporting

Creating visual reports of your construction data is as simple as a few short clicks. Select your report type, whether it's a progress report, deficiency reporting or simply a client update. Choose which photos are to be reported, generate your report and share directly with key staff and your customer. Save hundreds of hours in report compilation and administration.

Create a custom report or select from one of our Construction Templates. Once created, the report is saved with your photos and field data and easily retrieved through the Verified Web App. Securely share your reports with key staff and even your client at the tap of a button.

How Verified affects your bottom line

In a recent pilot study, Verified worked with a BC construction company to validate the Verified Apps in their workflow. The Company is responsible for several commercial and multi-family developments on Vancouver Island and the Lower Mainland. Following a period of initial setup and training, the Project Manager and his team set out to document their build, and use Verified to generate client reports. In our initial pilot we observed:

- Administration time was reduced by up to 4 hours per day per person
- Savings of up to \$120,000 were predicted for the first year¹
- More time was available to spend on site
- Client reporting was more frequent
- Deficiency and progress reports were generated and shared in a timely manner with site supers and key trades
- Key staff were able to collaborate using one easy-to-use tool
- The Company worked with Verified to configure their systems to match their existing workflow processes
