Front-end Developer & Client Support

Reports to: Project Manager/Development Team Lead

Experience: 3+ years in front-end application coding or portfolio

Qualification:

Verified Network Inc. aims to be the leading healthcare referral applications in North America. We are looking for someone with the right personality, skills and attitude to join our development team.

Our primary focus is on our customer, and as a front-end developer you will hold a multifunctional role supporting and training clients on our software while being intimately familiar with our code base and system functionality. We believe that multi-disciplined individuals bring great value to our work and provide better service to our customers, sharing their knowledge and expertise and helping translate customer needs into real-world code.

We are looking for a developer that loves people! Our commitment to our customers is paramount in what we do, and you will be the first contact for customers when they need help. When you aren't talking with our end users, you will be helping our team to design and develop our digital referral platform, taking feedback from customers and translating it into awesome tools to benefit them and their patients.

Our ideal candidate will have a genuine interest in coding, learning new skills and above all, in people. This role is a hybrid between technical support and development and our ideal candidate will have awesome communication skills, be patient and understanding when talking with end-users, and an ability to relate customer needs into modular functionality that we can add to our growing development roadmap. We don't need 20 years of experience, but you do need to be competent at front-end development in a LAMP stack environment. Our platform is SaaS based, secure and cross-browser compliant and your coding will need to fit into this.

This is a remote role and you can work from anywhere! Our team meets regularly and you must be comfortable with Zoom and Google Meet. Preference will be given to French speaking candidates and candidates in the Eastern time zone of Canada.

Required Qualifications

- You must be a permanent resident or citizen of Canada
- Educated to high school diploma level with 3+ years portfolio or graduate.
- Experience with developing PHP web applications, portal development and/or cloud computing environments.
- Solid understanding of Web technologies: JavaScript & jQuery, CSS, HTML, Responsive Design, AJAX, XML, JSON, and HTTP.
- Solid understanding of MySQL.

Bonus Qualifications

- Previous experience with PHP Frameworks (CodeIgniter, Symfony, Zend, etc.).
- Bootstrap or Foundation responsive frameworks.
- Understanding of Apache and its modules.
- Some knowledge of Linux Administration.
- Some knowledge of cross-browser development.
- Familiarity with product internationalization and localization.

How to Apply

Please ensure you meet the following criteria. Only qualified candidates will be responded to:

- Although this is a remote position, you must have the ability to live and work in Canada, i.e. You are a Canadian Citizen, Permanent Resident or have a Work Permit to work in Canada.

- You speak English and French at a conversational and written level.

- Preference will be given to candidates residing in Nova Scotia, New Brunswick, Newfoundland and Labrador and PEI.

Please send your resume with a cover letter and a link to an existing portfolio to andy.chapman@verifiednet.com.
